Additional Backup Information

This project will upgrade the wastewater interceptor system in the Upper West Waller Creek basin to address overflows, capacity concerns, and proposed redevelopment. Approximately 13,500 feet of 6-inch, 8-inch, and 15-inch diameter wastewater line will be replaced and new wastewater lines ranging in diameter from 12-inch to 24-inch will be constructed. Work will occur in Guadalupe from Airport Boulevard to 55 1/2 street, and in Chesterfield from Airport Blvd to 55 1/2 street, continuing south through easements to 47th Street. The project is primarily located along residential streets and Upper Waller Creek, where some creek restoration will be performed.

Additional authorization is needed for engineering design services for an additional 2,700 feet of wastewater line in surrounding residential streets that was not included in the original project scope, and to incorporate some existing engineering design performed by city staff into the construction documents. This additional authorization includes the cost of both construction phase services and design.

This project is located in zip codes 78753 and 78756.
